

## Funambol v6.5 Beta 2 – Release Notes

These release notes contain five sections:

1. Components
2. New Features and Functionality
3. Developer Change Log
4. Closed Issues
5. Known Issues

### 1. Components

<b>Component</b>	<b>Version</b>
Funambol Carrier Edition Portal	6.5.5
Funambol Community Edition	6.5.8
Administration Tool	6.5.7
J2ME Email Client	6.5.5
Windows Mobile Plug-in	6.5.7
Outlook Plug-in	6.5.6
iPod Plug-in	6.5.4
Java Demo Client	6.5.4
Command Line Client	6.5.4
C++ SDK	6.5.1
J2SE SDK	6.5.4
J2ME SDK	6.5.6

### 2. New Features and Functionality

#### *Data Synchronization Server (included in Funambol Community Edition)*

- Improved TCP/IP “Push” capability now reaches across all mobile operator networks
- Framework for integration with external mail system “Push” mechanism
- Framework for integration with external PIM system for “Push”
- Enhanced time zone (UTC) conversion handling
- Contact photo synchronization
- Compliance with dozens of more phones using additional synclets
- High availability framework for all Funambol server components including load balancing, no single point of failure, automatic load redistribution (Carrier Edition only)
- Management tools for monitoring the health and load of the system (Carrier Edition only)

#### *Funambol Portal (Carrier Edition only)*

- New signup and user activation process with improved user experience
- New and improved profile page
- Added a GoogleMap link if the city or ZIP is defined
- Automatic country selection in signup process
- Updated UI for edit/view events and contacts
- Added support for MD5 authentication
- Added better support for UTC devices
- Added support for more than 800 devices

*Inbox Listener (included in Funambol Community Edition)*

- New architecture for H/A and scalability

*Email Connector (included in Funambol Community Edition)*

- Added support for Google Apps
- Improved HTML to text conversion

*CTP Server (New! --(included in Funambol Community Edition)*

- New component to support client-side TCP/IP push

*Phones Support Module (included in Funambol Community Edition)*

- Many synclets to better support many more phones

*Windows Mobile plug-in*

- Client-side TCP/IP push (CTP)
- UI improvements
- Contact photo are now synchronized
- Auto-detection of language (English & German supported)

*Outlook plug-in*

- Contact photos are now synchronized

*J2ME Email Client*

- Addition of 150 new supported phones (all Motorola, Nokia and Sony Ericsson phones meeting minimum requirements of MIDP 2.0, WMA 1.1, heap size of at least 800Kb, and max download size of at least 250Kb)
- Added support for Cingular branded devices
- T9 search in the address book
- Shortcut (0) to delete messages
- Ability to call the sender of a message from the message view
- New settings for the user
  - Auto-connect at startup
  - Disable sound/vibration
- New device-specific help

### **3. Developer Change Log from Funambol V6**

*Data Synchronization Server*

- New CTPSender and AdvancedTCPSender (to combine TCPIPSender and CTPSender) to send notification messages via CTP Server
- Make Sync4jAddressListener configurable (via init params in the web.xml file) in order to disable STP (previously called TCP) or CTP notification. If enable-stp is true, the server stores the address received from the client (if it is reachable). If enable-ctp is true, if the address is not valid, the server returns 421 that means that the client could start a ctp connection
- Moved the logs file under Funambol/logs/ds-server
- Reviewed Sync4jServlet.doGet method in order to:
  - avoid white page opening a browser on http://server:port/funambol/ds
  - provide some basic server information like the version, model, manufacturer
- Added http header "X-funambol-ds-server" in the server responses (in Sync4jServlet and in Sync4jAddressListener). This header is set as follow: server-model v. server-version (e.g. 'DS Server v.6.5.2')

- Modified binding.xml to support more DataStore-CTCap in DevInf and added a test case to test it
- Introduced AbstractStatusMXBean class (abstract implementation of StatusMXBean interface)
- Added com.funambol.framework.notification.NotificationNotSentException
- Renamed encrypt-passwords.sh[.cmd] in encryptPasswords.sh[.cmd]
- Added changeAdminPassword.sh[.cmd] scripts useful to change the admin password
- Changed the tomcat configuration in the bundle in order to have its logs in:
  - Funambol
  - |- logs
  - |- http
- Reviewed Sync4jAddressListener configuration. Renamed enableSTP in accept-address-notification and enableCTP in ctptserver-available. If accept-address-notification is true, the address sent by the client is stored in the database if it is reachable; if it is false, the address sent by the client is not stored in the database and if there is already an address in the database, it is deleted. If ctptserver-available is true, and the address sent by the client is not accepted (because it is not reachable or accept-address-notification is false), the server returns 421 as status code. Otherwise, if ctptserver-available is false, and the address sent by the client is not accepted, 420 is returned. According to this status codes, a client could change its behavior (but this is not guaranteed because it is the client that decides what to do). Note that 421 doesn't mean that a ctp server is up and running
- Replaced AdvancedTCPSender with com.funambol.server.notification.tcp.TCPSender (it combines STPSender and CTPSender)
- Deprecated TCPIPSender (use com.funambol.server.notification.tcp.stp.STPSender)
- Changed default sender from AdvancedTCPSender to TCPSender (it is configured in the PushSender.xml file)
- Fixed a minor issue in AbstractStatusMXBean (the status was incorrectly formatted)

#### *Email Connector*

- HA/Cluster support
- Enabled notification from external system based on UDP messages
- Inboxlistener configurable to notify just for new emails or also for updates. (See parameter justNewNotification in com/funambol/email/inboxlistener/task/InboxListenerTask.xml, by default it is false).
- Inboxlistener checks the "delete flag" during the cache update (the email marked as deleted are not considered)
- Added GoogleMail as public server
- Removed command line console
- Changed the inboxlistener configuration file from com/funambol/pushlistener/PushListenerConfiguration.xml to com/funambol/email/inboxlistener/InboxListenerConfiguration.xml
- Removed field 'id\_push\_listener' from 'fnbl\_email\_push\_registry' since it is not used by the new Push Framework 6.5.1 and the new cluster architecture
- Moved the inboxlistener log file under Funambol/logs/inbox-listener
- Changed JMX port from 4099 to 4101
- Improved starting/stopping script files (with automatically jar files loading)
- Improved JMX interface with new information
- Put the property timeout in the connector xml configuration file
- Put the property registryTableName in the connector xml configuration file
- Renamed UDPUnicastReaderPlugin.java in UDPReaderPlugin.java
- Renamed UDPUnicastReaderPlugin.xml in UDPReaderPlugin.xml
- Added an UDP multicast reader in the UDPReaderPlugin (used in the InboxListener) to receive broadcasted UDP notifications

- Fixed addition of mails item which contain only flags (for imap account); if an addition of such mail is sent to the server, no email is added to the mail server and a status 500 is returned. In this way, no empty should be created on the mail server
- Added deletion of all account related information while removing an account
- Removed the version from the configuration file because now it is read from META-INF/maven/funambol/inbox-listener/pom.properties
- Changed the name of the main MBean from `com.funambol.pushframework=type:PushFramework` to `com.funambol.inboxlistener=type:InboxListener`

#### *Foundation Connector*

- Reviewed TEL: handling in order to set its value as TEL:VOICE
- Fixed bug with empty RDATE/EXDATE properties
- Allowed correct parsing of multiple line breaks (they are collapsed into one logical line break) in vCard, vCalendar and iCalendar data
- Increased `fnbl_pim_listener_registry.username` to `varchar(255)`
- Fixed bug in the vCard parser related with parameters of the TEL property
- Reviewed PIMSyncSource in order to change the policy about conversion dates. These are the followed roles:
  - if `device.getConvertDatePolicy()` is equal to `ConvertDatePolicy.CONVERT_DATE` and the timezone is not null (this means in the `fnbl_device` table there is a timezone and `convert_date` field is 'Y'), the dates are converted
  - if `device.getConvertDatePolicy()` is equal to `ConvertDatePolicy.UNSPECIFIED` (this means in the `fnbl_device` table the `convert_date` field is empty) and the device doesn't support UTC (from its capabilities) and the timezone is not null, the dates are converted
- otherwise no conversion is performed
- Contact's photo synchronization

#### *PIM Listener*

- HA/Cluster support
- Renamed log file from `pushlistener.log` to `pimlistener.log`
- Changed the configuration file from `com/funambol/pushlistener/PushListenerConfiguration.xml` to `com/funambol/pimlistener/PIMListenerConfiguration.xml`
- Removed field `'id_push_listener'` from `'fnbl_push_listener_registry'` since it is not used by the new Push Framework 6.5.1 and the new cluster architecture
- Moved the log file under `Funambol/logs/pim-listener`
- Changed JMX port from 3099 to 3101
- Improved starting/stopping script files (with automatically jar files loading)
- Improved JMX interface with new information
- Synchronized method `PushListener.clusterChange()`
- Synchronized methods `RegistryMonitor.run()` and `RegistryMonitor.setScheduledTaskExecutor()`. Those methods must be synchronized in order to be sure that the `scheduledTaskExecutor` is not changed when the registry is checking the entries
- Uncommented cluster configuration
- Added `-Dfile.encoding=UTF-8` in the script files
- Fixed a wrong usage of MDC class in `PimTask.execute()`

#### *Phones Support Module*

- Added the following synclets for:
  - Motorola EPOC (MotorolaEPOCXin – MotorolaEPOCXout)

- Motorola PEBLU6 (MotorolaPEBLU6out)
- Motorola V5XX (MotorolaV5XXin)
- Nokia 6020 (Nokia6020in – Nokia6020out)
- Panasonic X70 (PanasonicX70in – PanasonicX70out)
- Siemens M55 (SiemensM55in – SiemensM55out)
- Sony Ericsson EPOC (SonyEricssonEPOCXin – SonyEricssonEPOCXout)
- Sony Ericsson M600 (SonyEricssonM600Iout)
- Removed the following synclets for:
  - Motorola V3 (MotorolaV3in)
  - Sony Ericsson EPOC (EPOCXin – EPOCXout)
- Improved synclets for:
  - Motorola K1 (MotorolaK1in)
  - Motorola X (MotorolaXin)
  - Nokia S60 (NokiaS60out)
  - Siemens S5X (SiemensS5Xin)
  - Siemens SK65X (SiemensSK65Xin – SiemensSK65Xout)
  - SonyEricsson K750I (SonyEricssonK750Iout)
  - SonyEricsson M600I (SonyEricssonM600Iin)
  - SonyEricsson V800 (SonyEricssonV800in)

#### *Administration Tool*

- Minor fix in logger edit panel in order to handle lower case level
- Changed the device details panel about the conversion dates removing the convert date checkbox and adding two new radio buttons:
  - Enabled: to enable the conversion to current TZ
  - Disabled: to disable the conversion to current TZ
- The values of those radio buttons is based on the values in the db and on the device capabilities (if the device supports UTC, 'Disabled' is the default value otherwise the default one is 'Enabled')

#### *Outlook Plug-in*

- Improved vCard/vCalendar synchronization: now all properties are supported
- Added "Picture" property for contacts. It's supported only by Outlook 2003 or later
- Improved build procedure (auto update from CVS, generate docs, switch targets)
- Added Doxygen documentation
- Added Plugin Design Document
- SIF tag changed: "Picture" field in SIF is changed to "Photo", also attribute "TYPE="JPEG" is added into SIF
- vCalendar parser: if AALARM not found, the reminder is resetted to 0 instead of leaving it to the default value
- Better memory handling: removed memory leaks when sending items from Client to Server
- Including new Redemption.dll v4.4 (previous releases included Redemption.dll v4.2)
- "PatternEndDate" is sent out empty (Client to Server) for appointments items: it's redundant, using only "Occurrences". However both are accepted from Server to Client (like before)
- "ReminderTime" property of tasks is now sent in local time "YYYYMMDDThhmmss" instead of UTC. However both UTC and local time values are accepted for incoming tasks
- "BusinessWebPage" is no more supported for contacts on Outlook plugin.
- "PatternEndDate" is sent in UTC format from Client to Server, it's now the exact date+time when the last occurrence starts

### *Windows Mobile plug-in*

- The plugin is started after installation and ask the credentials to the user at the startup, when they are not set
- Multilingual support: ready to support different languages in the same build, currently there is English and German in the package
- CTP support: activating the notification from Menu->Notification both STP notification (usual notification procedure) and new CTP notification start. STP notification is the default choice and if it works properly the CTP doesn't start
- UI refactoring
- "Push client": setting the push mode, it activates also the client push for the PIM sources (contact, calendar and task). The client listens for PIM's modifications and informs the server in the next 5 minutes. Then the client starts a sync for the sources modified
- Added send log feature. From About->Logging screen there is a new menu. The "Send log" feature is added. It creates a mail with the previous sync log as attachment and send it to fwm-logs@funambol.com. The log cannot be larger than 500kb. If larger, only the last 500k are attached to the mail
- Support for all Contacts fields
- Added safe check for low storage memory

### *Java ME Email Client*

- UI
  - Improved Contact List performances
  - Improved Message List performances
  - T9 Contact Search in Contact List
  - Call Sender function available in view message
  - Better UI notifications during sync
  - Shortcut for deleting messages in Inbox and MessageView (0 key)
  - Help screen with help contents
  - Logging view with only error level available to users. No settings, just enable/disable log
  - Offline status: sync commands removed if the user refuse to grant network permission for Nokia/SE devices. Not implemented for Motorola phones where there's the possibility to connect again
  - Special Characters support added (i.e. euro)
  - Search screen is present only on low-end devices. In all other bundles has been removed since T9 is fast
  - New Settings available for users
  - Auto-Connect at startup
  - Sound/Vibration disabling
- Build Management
  - SonyEricsson build
  - Nokia E61 build
  - Symbian UIQ build (for devices like Sony Ericsson P900)
  - Nokia N73 build
  - Bundles for Motorola phones now categorized in: High-Tier, Low-Tier and Linux OS
  - Samsung build
  - LG build
  - Cingular build
- Design
  - Contact Manager has been redesigned with cache for better performance
  - Contact List has been redesigned
  - SyncListener has been added to listen to synchronization events

### Web Demo

- Changed the logging directory of the webdemo in order to have:  
Funambol  
|- logs  
  |- ds-server  
    - ds-server.webdemo.log
- Contact's photo visualization

### J2SE SDKs

- Added handling of incoming Meta/Format for Add and Replace commands (J2SE)
- Note that it was not possible to do the same with Meta/Type as it would require some changes to the sync4j-clientframework package (J2SE)

## 4. Closed Issues

<b>Component</b>	<b>ID</b>	<b>Description</b>
Administration Tool	2572	The About information copyright for the Admin Tool needs to be corrected
Administration Tool	2706	Wrong redirection page after clicking cancel from the add principal panel
Administration Tool	3082	Server URI field needs checks on its format
Administration Tool	3366	Add a control on the mail address field
Administration Tool	3450	Correct the message displayed by the pop-up when user resets sync timestamps
DS Server	2906	Server did not close session when sync ends with 'ErrorSetting Preliminary Info: Error getting Account information'
DS Server	3380	Log file names review
DS Server	3468	install-modules.sh needs first of all the check of the directory from which the script it's launched
DS Server	3538	The DECLARED_SIZE of each item is equal to the DECLARED_SIZE of the last item
DS Server	3558	Motorola RAZR2 V8: mobile phone and other phone are not stored on the Portal
DS Server	3651	If in web.xml i disable stp this is in fact still invocated
DS Server	3666	Link provided in the readme.txt file is not working
DS Server	3667	wbxmlToxml.sh xmlTowbxml.sh need the JAVA_HOME
DS Server (Bundle)	3705	fnblstatus.exe error encountered after bundle install and startup
DS Server (Module:Foundation)	677	Siemens S56 - All Day Events are not treated as such
DS Server (Module:Foundation)	3243	"More data" causes wrong line breaks that can't be parsed
DS Server (Module:Foundation)	3403	EXDATE and RDATE of vCalendar should be accepted even if empty
DS Server (Module:Foundation)	3545	'No end date' property of an weekly recurring event is lost in Outlook after a 'refresh from server' sync"
Email Connector	2907	Email sync - when server closes an expired session, the email connector throws an exception
Email Connector	2981	'inboxlistener.sh status' never retrieves the JAVA_OPTS variable value
Email Connector	3140	The command line console is not available anymore
Email Connector	3288	Error checking TO list for the email - Illegal whitespace in

<b>Component</b>	<b>ID</b>	<b>Description</b>
		address
Email Connector	3354	Optimization in MessageCreator.setNewHeaderIn
Email Connector	3364	GoogleMail missing from the default Public Mail Servers after installation of the bundle
Email Connector	3365	Default Mail Server Port Numbers are not shown in the Admin Tool Email Connector Adding user account: insert account data panel when the panel is opened
Email Connector	3367	The mail count for messages from mail server Inbox and to be added is incorrect in the il.log messages
Email Connector	3376	No Notification of New Email Messages if No Previous Manual Synchronization was Performed
Email Connector	3386	'Unexpected Exception' with java.lang.NullPointerException in the email-FunambolEmailConnector panel of Admin Tool
Email Connector	3398	JAVA_OPTS variable is passed as parameter to stop the inbox-listener but in fact this variable is not set
Email Connector	3402	Switching from a POP3 to an IMAP email account cause duplicated item on inbox table
Email Connector	3404	Setting NO SSL outgoing and port 995/993 for POP/IMAP account
Email Connector	3410	'From:' is 'null null' if no sender is indicated in the Windows Mobile Plug-in
Email Connector	3477	JAVA_HOME path is valid only for bundle server
Email Connector	3480	Exception on server during Get Mail from javaME client on Nokia E61
Email Connector	3543	Missing option in the inboxlistener.sh script
Email Connector	3559	Error creating SyncItemInfo
Email Connector	3560	UnknownHostException: imap.aol.com
Email Connector	3568	Error in method UtcToDatejava.text.ParseException
Email Connector	3388	Administration tool freezes (folders from 'account details')
Email Connector	3404	Setting NO SSL outgoing and port 995/993 for POP/IMAP account
Email Connector	3431	Wrong value for refresh time in the il.log file
Email Connector	3561	AccountNotFoundException
Email Connector	3662	YAHOO Outgoing Mail Server Port needs to be 465
Email Connector	3655	Typo in log of inboxlistener
Email Connector	3841	Error handling Accounts message is logged in the output message display of the Admin tool
Email Connector	3899	Email with attachment rfc/822 and Content-Disposition: inline; are not displayed correctly
PIM Listener	3624	Typo in pimlistener.log on word syncsources
PIM Listener	3632	Pimlistener log logs a line with two device ids while should be specific of one device id only
iPod Plug-in	2655	Error during slow sync
iPod Plug-in	3566	The sync between server and iPod ends with errors for modifications made on server side
Java Demo Client	3486	Events synchronized from server to Java Demo Client are displayed as empty in Java Demo
SDK J2SE	3566	The sync between server and iPod ends with errors for modifications made on server side
Outlook Plug-in	2051	Subfolders deleted from Outlook are not recovered at full sync for 'Calendar' and 'Calendar' sections when using 'vCard' and 'iCal' data formats
Outlook Plug-in	2585	Syncing with vCard format / card syncsource between

<b>Component</b>	<b>ID</b>	<b>Description</b>
		server field updates are incorrect
Outlook Plug-in	2671	[DOC] Outlook Plug-in user guide instructions for 'cal/event' SyncSources related to 'vCalendar' data format
Outlook Plug-in	2682	The plugin crash if you don't answer the prompt before performing a slow sync.
Outlook Plug-in	2683	OW 307104: Slow sync with notes using windows Vista
Outlook Plug-in	2715	reminder_sound_file field is never initialized
Outlook Plug-in	2794	'Funambol Outlook Client Error:An unexpected exception has occurred!' for synchronization of Calendar exceptions
Outlook Plug-in	2807	'Funambol Outlook Client Error' for tasks modified on iPod at synchronization between iPod->Portal->Outlook
Outlook Plug-in	2818	The Sync panel is displayed instead of the Account panel when trying to sync having no username and password set
Outlook Plug-in	2850	Contacts 'File As' field issue at 'Replace all of the Outlook data with data from server' synchronization
Outlook Plug-in	2860	'Funambol Outlook Client Error' displayed when canceling the sync while exceptions are normalized in Outlook
Outlook Plug-in	2950	OW 307103: multiple categories messed up when syncing from server to local
Outlook Plug-in	2963	OW 307005: Error with japanese chars inside folders names
Outlook Plug-in	2974	URL field is duplicated on the server db
Outlook Plug-in	3073	OW #307186: DST Date time conversion with previous year events.
Outlook Plug-in	3074	Synchronization between Outlook and the Portal ends with errors for exceptions of recurring events originating from Nokia 7610
Outlook Plug-in	3343	Checkmark shows up in the wrong place in the UI...
Outlook Plug-in	3358	Different Behavior in the Warning Windows in the Outlook and Windows Mobile Plug-ins
Outlook Plug-in	3382	Icon display issue in the main window of Outlook Plug-in when Tasks are not selected for synchronization
Outlook Plug-in	3425	Contacts 'Anniversary / Birthday' issue at synchronization between Outlook 2007 and the Funambol DS Server
Outlook Plug-in	3427	Tasks 'Reminder' issue at synchronization between Outlook->Funambol DS Server->Qtek 9100
Outlook Plug-in	3482	Issues during the upgrade of Outlook Plug in from 6.0.14 to 6.5.0
Outlook Plug-in	3534	Reminder improperly set in Outlook when using the 'vCalendar / event' 'data format / remote name' for 'Calendar'
Outlook Plug-in	3548	Portal version simplification
Outlook Plug-in	3567	Windows Vista: display issue with 'confirm full sync' window of Outlook Plug-in at scheduled sync
Outlook Plug-in	3688	Last instance of an daily rec event synced from Outlook is missing on N73 when the timezone is not set server side
Outlook Plug-in	3734	We should not allow users to set schedule sync time to more than 23:59 minutes...
Outlook Plug-in	3900	Add a control if no items have been selected for sync
Outlook Plug-in	3908	User report: error syncing with Outlook 2007
Outlook Plug-in	3913	OW 307010: Auto-Sync does not seem to work correctly
Outlook Plug-in	4006	Recurring events that have an End Date set, synchronized from Outlook to Portal, are not displayed on Portal

<b>Component</b>	<b>ID</b>	<b>Description</b>
Outlook Plug-in	307597	OW: Log file
Outlook Plug-in	4017	OW 307746 - OL plugin v6.5.0 does not work with international Windows usernames
Windows Mobile plug-in	2300	Notification of new emails from Email Client on WM device not working for Funambol email account
Windows Mobile plug-in	2739	"Cannot execute \Program Files\Funambol\handleservice.exe
Windows Mobile plug-in	2822	Qtek 8310 - Nickname, Manager and Company phone fields are not sent
Windows Mobile plug-in	2838	Email - "Send/Receive" doesn't work when the Email sync is not set on the plug-in
Windows Mobile plug-in	3133	The windows mobile plug-in should be able to send its sync log
Windows Mobile plug-in	3150	Receiving sms push notification in the sms inbox
Windows Mobile plug-in	3151	Contacts - "IM address" field isn't synced
Windows Mobile plug-in	3169	Improve performance of plugin when many PIM items are synced

<b>Component</b>	<b>ID</b>	<b>Description</b>
Windows Mobile plug-in	3686	Cleanup failed with a large number of contacts on device and a notify auto sync running and finishing while the cleanup was in process
Windows Mobile plug-in	3725	The htc doesn't always send the ready messages to the CT...
Windows Mobile plug-in	3739	Contacts lost from server after contact cleanup and contact sync run at the same time.
<i>Windows Mobile plug-in</i>	3740	Cleanup of email: Need additional info in warning message prior to erasure of data
Windows Mobile plug-in	3749	German Translation
Windows Mobile plug-in	3750	German Translation
Windows Mobile plug-in	3751	Text enhancement
Windows Mobile plug-in	3753	German Translation
Windows Mobile plug-in	3754	German Translation
Windows Mobile plug-in	3804	In "About" view "Version v." is redundant
Windows Mobile plug-in	3805	[German language] - Label not completely visible in the Email Settings
Windows Mobile plug-in	3806	[German language] - Labels too small under the PIM Settings
Windows Mobile plug-in	3807	[German language] - Texts for the path to folders seem not clear
Windows Mobile plug-in	3808	[German language] - Text issues under the Sync Settings
Windows Mobile plug-in	3810	[German language] - Issues as per Bug# 375
Windows Mobile plug-in	3827	Label "E-Mail" in different places should be "Email" instead
Windows Mobile plug-in	3833	Cleanup - long deletion time for large number of full contacts and apparent memory leakage
Windows Mobile plug-in	3834	Text for the path to folder doesn't seem right
Windows Mobile plug-in	3894	New Messages Notification occurs during email sync instead of just at end
Windows Mobile plug-in	3902	Email remote name is deleted in the Sync Settings -> Advanced sync settings on the plug-in after trying to save or saving email advanced settings
Windows Mobile plug-in	3943	'PIM options...' in Sync Settings not active when Notes or Briefcase sources are selected
Windows Mobile plug-in	3987	MS: Mail priority is not synced (#52)
Windows Mobile plug-in	3991	Tasks 'ReminderTime' to be changed from UTC to localtime
Windows Mobile plug-in	3994	RFE: Device PIM Push
Windows Mobile plug-in	4061	Cleanup – False text in alert window
Windows Mobile plug-in	307313	OW reporter: push email notification sent successfully, but no synch is performed. This is due to the fact that if the plug-in is installed on a storage card it doesn't get push. Now it is fixed.
J2ME client	2142	Funambol Client Icon on Application Screen is too small on certain devices
J2ME client	2223	Side scrollbar overlaps mail body text
J2ME client	2618	Browse link should also pick up email addresses...
J2ME client	2620	An option to not auto-start sync upon login...
J2ME client	2702	Before selecting access point an empty Inbox is displayed for few seconds on Nokia devices
